1.

What is the "cache" used for in our implementation of forward propagation and backward propagation?

○ We use it to pass variables computed during forward propagation to the corresponding backward propagation step. It contains useful values for backward propagation to compute derivatives.

▲

Correct
Correct, the "cache" records values from the forward propagation units and sends it to the backward propagation units because it is needed to compute the chain rule derivatives.

○ It is used to keep track of the hyperparameters that we are searching over, to speed up computation.

○ It is used to cache the intermediate values of the cost function during training.

○ We use it to pass variables computed during backward propagation to the corresponding forward propagation step. It contains useful values for forward propagation to compute activations.

✔ **1 / 1 points**

2.

Among the following, which ones are "hyperparameters"? (Check all that apply.)

☐

number of layers L in the neural network

Key concepts on Deep Neural Networks

Quiz, 10 questions

10/10 points (100%)

Correct

☑ size of the hidden layers $n^{[l]}$

Correct

☑ weight matrices $W^{[l]}$

Un-selected is correct

☑ learning rate α

Correct

☑ activation values $a^{[l]}$

Un-selected is correct

☑ bias vectors $b^{[l]}$

Un-selected is correct

☑ number of iterations

Correct

✔ 1 / 1 points

3.

Which of the following statements is true?

◯ The deeper layers of a neural network are typically computing more complex features of the input than the earlier layers.

Correct

○ The earlier layers of a neural network are typically computing more
complex features of the input than the deeper layers.

4.

Vectorization allows you to compute forward propagation in an L-layer
neural network without an explicit for-loop (or any other explicit iterative
loop) over the layers l=1, 2, …,L. True/False?

○ True

⊙ False

Correct

Forward propagation propagates the input through the layers,
although for shallow networks we may just write all the lines (
$a^{[2]} = g^{[2]}(z^{[2]})$, $z^{[2]} = W^{[2]}a^{[1]} + b^{[2]}$, …) in a deeper network, we
cannot avoid a for loop iterating over the layers: ($a^{[l]} = g^{[l]}(z^{[l]})$,
$z^{[l]} = W^{[l]}a^{[l-1]} + b^{[l]}$, …).

points

5.

Assume we store the values for $n^{[l]}$ in an array called layers, as follows:
layer_dims = [n_x, 4,3,2,1]. So layer 1 has four hidden units, layer 2 has 3
hidden units and so on. Which of the following for-loops will allow you to
initialize the parameters for the model?

○
```
1   for(i in range(1, len(layer_dims)/2)):
2     parameter['W' + str(i)] = np.random.randn(layers[i], layers[i-1])) *
        0.01
3     parameter['b' + str(i)] = np.random.randn(layers[i], 1) * 0.01
```

○
```
1   for(i in range(1, len(layer_dims)/2)):
2     parameter['W' + str(i)] = np.random.randn(layers[i], layers[i-1])) *
        0.01
3     parameter['b' + str(i)] = np.random.randn(layers[i-1], 1) * 0.01
```

○
```
1   for(i in range(1, len(layer_dims))):
2     parameter['W' + str(i)] = np.random.randn(layers[i-1], layers[i])) *
        0.01
3     parameter['b' + str(i)] = np.random.randn(layers[i], 1) * 0.01
```

6.

Consider the following neural network.

How many layers does this network have?

○   The number of layers L is 4. The number of hidden layers is 3.

▲

Correct
Yes. As seen in lecture, the number of layers is counted as the number of hidden layers + 1. The input and output layers are not counted as hidden layers.

○   The number of layers L is 3. The number of hidden layers is 3.

○   The number of layers L is 4. The number of hidden layers is 4.

○   The number of layers L is 5. The number of hidden layers is 4.

Key concepts on Deep Neural Networks

Quiz, 10 questions

During forward propagation, in the forward function for a layer l you need to know what is the activation function in a layer (Sigmoid, tanh, ReLU, etc.). During backpropagation, the corresponding backward function also needs to know what is the activation function for layer l, since the gradient depends on it. True/False?

10/10 points (100%)

  ⊙ True

Correct
Yes, as you've seen in the week 3 each activation has a different derivative. Thus, during backpropagation you need to know which activation was used in the forward propagation to be able to compute the correct derivative.

  ○ False

✓ 1 / 1
    points

8.
There are certain functions with the following properties:

(i) To compute the function using a shallow network circuit, you will need a large network (where we measure size by the number of logic gates in the network), but (ii) To compute it using a deep network circuit, you need only an exponentially smaller network. True/False?

  ⊙ True
Correct

  ○ False

✓ 1 / 1
    points

9.

Consider the following 2 hidden layer neural network:

Quiz, 10 questions

Which of the following statements are True? (Check all that apply).

☑ $W^{[1]}$ will have shape (4, 4)

Correct
Yes. More generally, the shape of $W^{[l]}$ is $(n^{[l]}, n^{[l-1]})$.

☑ $b^{[1]}$ will have shape (4, 1)

Correct
Yes. More generally, the shape of $b^{[l]}$ is $(n^{[l]}, 1)$.

☐ $W^{[1]}$ will have shape (3, 4)

Un-selected is correct

☐ $b^{[1]}$ will have shape (3, 1)

Un-selected is correct

☑ $W^{[2]}$ will have shape (3, 4)

Correct
Yes. More generally, the shape of $W^{[l]}$ is $(n^{[l]}, n^{[l-1]})$.

☐

$b^{[2]}$ will have shape (1, 1)

Key concepts on Deep Neural Networks

Quiz, 10 questions

☐ $W^{[2]}$ will have shape (3, 1)

Un-selected is correct

☐ $b^{[2]}$ will have shape (3, 1)

Correct
Yes. More generally, the shape of $b^{[l]}$ is $(n^{[l]}, 1)$.

☐ $W^{[3]}$ will have shape (3, 1)

Un-selected is correct

☐ $b^{[3]}$ will have shape (1, 1)

Correct
Yes. More generally, the shape of $b^{[l]}$ is $(n^{[l]}, 1)$.

☐ $W^{[3]}$ will have shape (1, 3)

Correct
Yes. More generally, the shape of $W^{[l]}$ is $(n^{[l]}, n^{[l-1]})$.

☐ $b^{[3]}$ will have shape (3, 1)

Un-selected is correct

✓   1 / 1
points

10.
Whereas the previous question used a specific network, in the general case
what is the dimension of W^{[l]}, the weight matrix associated with layer l?

○ $W^{[l]}$ has shape $(n^{[l]}, n^{[l-1]})$

Correct

Key concepts on Deep Neural Networks   **10/10 points (100%)**

True

Quiz, 10 questions

   ○ $W^{[l]}$ has shape $(n^{[l+1]}, n^{[l]})$

   ○ $W^{[l]}$ has shape $(n^{[l-1]}, n^{[l]})$

   ○ $W^{[l]}$ has shape $(n^{[l]}, n^{[l+1]})$

👍 👎 ⚑

$W^{[l]}$ has shape $(n^{[l+1]}, n^{[l]})$
